FEEDING RECOMMENDATIONS

- Replace up to 10 % of the grain meal with additional salt for the first 10 to 14 days for adaptation
- Thereafter the best regulated intakes are obtained when licks are supplied unrestricted
- Salt inclusion rates are guidelines – may differ according to veld type and specific conditions
- Supply licks according to stage of reproduction, quality of available grazing and body condition of animals
- Good quality, unrestricted grazing and / or roughage must be available at all times together with these licks
- Replace up to 10 % of the grain meal with molasses meal or molasses syrup if preferred
- For younger cattle it is recommended that 50 kg grain meal is replaced with oilcake meal
- Consult a Feedtek nutritionist if actual lick intakes differ from recommended intakes after 14 days on the lick
- Licks contain NPN – mix ingredients thoroughly, protect against rain and do not feed to horses and game
